## MULTI-STAGE FILTRATION - save big by Refreshing, NOT REPLACING, solvent!

### THREE STEP PROCESS:

- 1 SINK DRAIN FILTER**  
 uses foam block to collect large particulates for easy disposal
- 2 CANISTER FILTER (COARSE, MEDIUM, OR FINE)**  
 removes particulates from 100, 50 to 10 microns respectively
- 3 DYNA-TRAP FILTER BAG**  
 removes oils and greases, extending solvent life

When filters and filter bags need replacing, allow to dry completely and dispose of according to local guidelines. This is **DRY waste**, not hazardous liquid waste.

**MUCH LOWER COST WITH LESS RISK**
